

Upper Molar RCT CASE SUMMARY:230907281944

Mahamutha presented with a maxillary left second molar (27) requiring endodontic treatment. Following clinical and radiographic evaluation, root canal therapy was planned. After isolation and access preparation, the canals were identified, negotiated, cleaned, shaped, and thoroughly irrigated. Once adequate disinfection was achieved, the canals were obturated and the tooth was restored with a satisfactory coronal seal to preserve function and long-term tooth integrity.
